1. Introduction

The Group Tour Booking System is a comprehensive platform designed to streamline the lifecycle of organize group travel. This document focuses specifically on the requirements for the Consultant role, who acts as the bridge between the customer and the administrative backend.

2. Purpose

The purpose of this SRS is to define the specific features, interfaces, and constraints for the Consultant module. It ensures that the consultants have the necessary tools to manage inquiries, tailor tour packages, and provide high quality support to customers throughout the booking process.

3. Scope

The Consultant module includes lead management, personalized itinerary creation, customer communication logs, and booking verification. It integrates with the Admin module for inventory (hotels/transport) and the Customer module for feedback and payments.

4. Objectives

- To reduce the response time for tour inquiries by 40%.
- To provide consultants with a unified dashboard for lead tracking.
- To enable seamless customisation of standard tour packages for specific
group needs.
- To maintain a transparent communication history with customers.

5. Functional Requirements

ID	Requirement	Description
FRC1	Lead Dashboard	Consultants must be able to view and filter new inquiries assigned to them.
FRC2	Package	Consultants can adjust itinerary items, pricing, and dates for specific customer requests.
FRC3	Booking Approval	Consultants must verify customer documents and initial payments before final admin approval.
FRC4	Communication Log	A system to record all emails and calls made to the customer within the portal.

6. Primary Actors of the System

1. Admin: Manages master data, inventory (flights/hotels), and broad system settings.
2. Consultant: Handles sales, customer support, and package tailoring.
3. Customer: Browses tours, makes bookings, and provides travel Documentation.

7. Use Case Diagrams

8. User Stories

As a Consultant	I Need To	So that I Can
Consultant	Login I want to securely log into my dedicated account using my credentials	I can access the consultant dashboard, manage custom packages, and track client interactions.
Consultant	Add destination I want to add a new destination to the master database with images, descriptions, and metadata	I can later reference it when building custom travel packages for clients.
Consultant	Add package I want to create a new standard holiday/travel package by combining destinations, setting a price, and adding itineraries	clients can browse and book pre-configured travel options directly from the platform.
Consultant	I want to attach standard or custom Terms & Conditions (T&C) and cancellation policies to travel packages	clients are legally informed and must explicitly accept them before proceeding to payment
Consultant	I want to securely enter my payment details and select from multiple payment methods	my transaction is processed safely and my booking confirmation is generated immediately
Consultant	I want to receive timely, automated, and contextual notifications via my preferred channels (Email, In-App, SMS)	I stay instantly informed about booking confirmations, payment receipts, status updates, or actions requiring my attention.

Consultant	I want to attach internal notes, reminders, and log interactions directly onto a client's profile or booking folder	I or any other team member handling the account can view the history and specific operational constraints of this file.
Consultant	I want to log into a centralized, role-tailored dashboard landing page	I can instantly view my active bookings, track pending actions, and manage my profiles or packages without navigating through disjointed menus.
Consultant	I want to build a unique, customized travel package tailored to a specific client's request by modifying destinations, activities, and pricing	I can send them a personalized proposal that they can review and pay for directly from their dashboard.

9. BPMN

10. Non-Functional Requirements Performance:

The dashboard should load within 2 seconds. Security: Consultant access must be restricted via Role-Based Access Control(RBAC). Availability: The system should be accessible 24/7 with 99.9% uptime.

12. Conclusion

This SRS specifies the essential capabilities required for the Consultant role in the Group Tour Booking System. By implementing these features, the organization can ensure professional service delivery and efficient tour management.
